Education

Shanghai Jiao Tong University (SJTU), Shanghai, China — Expected 2028

B.Eng. Mechanical and Power Engineering — Class of 2024

Relevant Coursework: C++ Programming, Data Structures | CET-6: 488

Projects

SJMCL - Minecraft Launcher Development — 2025 – Present

TypeScript (Next.js), Chakra UI, Tauri v2 Open-source Contributor

Contribute to content discovery, desktop integration, and error handling in a cross-platform Minecraft launcher.

- Added community news sources to Discover (PR #2031) and `.mrpack` file association for quick modpack import (PR #1824)
- Improved Microsoft sign-in XSTS error messages (PR #1571) and Markdown table rendering for extensions (PR #1649)

astrbot_plugin_autoissue - Chat-to-GitHub Issues — 2026

Python, AstrBot, LLMs, GitHub API Personal Open-source Project

Turn group-chat discussions into structured GitHub Issues with an automated capture-to-link workflow.

- Parse quoted and nested forwarded messages; use an LLM to draft titles and bodies, create Issues, and return links
- Support persistent per-group repository binding and admin commands; cache repository README context for issue drafting

MindWolf - AI Werewolf Game Prototype — 2026

Python, FastAPI, WebSocket, React, TypeScript Personal Project

An LLM-agent experiment for 12-player games with per-player model configuration.

- Built player belief updates and eight deception-strategy prompts; stream game events to a React spectator UI over WebSocket

Minecraft: Biome Rivals - Card Game Prototype — 2026

Unity 6 (C#), Nakama (TypeScript), JSON Schema Personal Project

A testable Unity client with server-authoritative rules and a shared protocol.

- Resolve turns, deployment, and combat on the server; built an offline demo, rules tests, and Unity EditMode validation
- Versioned JSON Schema contracts and private player-state projections; added reconnect and dual-client validation scripts

Skills

- Languages: Python, TypeScript, JavaScript, Rust, C# | Backend: FastAPI, asyncio, WebSocket, Nakama
- Frontend/Client: React, Next.js, Tailwind CSS, Chakra UI, Unity 6, Tauri v2
- AI/Engineering: LLM integration and structured output, Git, GitHub Actions, JSON Schema, automated tests

Honors & Activities

Zhiyuan Scholarship | First Prize, Jiaoyan Campus Project | SJTU Minecraft Club

- Technical writing in Chinese and English | Interests: AI applications, backend systems, open source
